

Spectrum MV Pro LED Clamp Spotlights

The S134 LED Display Clamp Spotlights is a high quality spotlight manufactured from brass to give the best possible finishes and are the perfect portable lighting solution for illuminating banners and exhibition walls.

The spotlight head is fully adjustable and rotates through 350 degrees and tilts through 90 degrees to direct light exactly where it is needed.

The S134 Spotlight accepts all types of GU10 LED Lamps up to 10W and are available in various colour temperatures and colour renderings. GU10 lamps are available in colour temperatures ranging from 3000K (warm white), 4000K (neutral white) or 6500K (daylight white) with standard

CRI80 or high CRI90 models available for high end projects. The S134 portable LED clamp spotlight projects from the mounted surface by 350mm to give a wash of light down the mounted surface.

The clamp will fix to panels between 5mm to 50mm thick giving a rigid and wide range for installing in many stand construction systems.

Manufactured and supplied as standard with a 2m UK mains lead. S134 clamp spotlights can also be supplied with a range of GST18i3 connectors to allow the spotlights to be "daisy chained" together so that up to 10 spotlights can be operated for a single UK socket.

Handy carry bags are available as an additional item for the safe and easy transport with extra space for LED lamps and cables.

Spectrum MV Pro LED Clamp Spotlights

WHAT'S INCLUDED?

- 1 x S134 GU10 LED Clamp Spotlight
- 1 x 2m UK 3A Mains Lead.
- 1 x Display Clamp for 5mm to 50mm Panels
