With over 21 years successful years manufacturing specialist lighting, the name Display Lighting has grown to be synonymous within the illumination of retail displays, museum showcases, jewellery cabinets, counters and exhibitions.

The aim of Display Lighting, founded in 1999 by lighting design engineer Paul Breedon, was to offer purpose built lighting solutions to the display industry. Today, over 21 years on, Display Lighting has far exceeded its original goal and is now established as a key player within the UK lighting industry offering innovative, attractive and reliable lighting solutions to an array of business sectors worldwide including retail, leisure, exhibition, museum and point of purchase.

The design of bespoke lighting systems is a speciality of Display Lighting and the experienced design team work closely with retailers and their designers in the development of lighting systems to complement and showcase merchandise, branding and displays. Many have reported increased sales as a direct result of specifying and installing Display Lighting LED systems.

So if you have been asked to source and specify lighting for a display and are feeling a bit lost or you are just looking for something different then talk to Display Lighting's professionals. Whatever the lighting application, by using the latest light sources, high quality components and a combined lighting experience of almost 100 years, Display Lighting can help you achieve your desired lighting effect.

Let us help you...see things in a new light.

TAG Heuer

Luxury Swiss watch maker TAG Heuer chose the DPLED Gantry system to provide sleek, uniform high intensity LED illumination to their instantly recognisable beautiful time pieces within their elegantly understated display cabinets. The DPLED Gantry system has been specified by many of the UK's leading high street retailers for its reliability and versatility. The DPLED system is available as single and double gantry to enable single or double sided illumination. The system is modular offering various options for installation allowing designers and shop-fitters increasing flexibility.

Links of London

UK designer brand Links of London chose DPLED Gantry luminaires combined with Spectrum LED Pro spotlights and VPLED LED Corner Profiles to illuminate their Brook Street store in London. The quality UK build of these luminaires with their unobtrusive uniform illumination, high CRI and UK manufacture were key factors in the selection of these Display Lighting products which offer fantastic design continuity throughout the store, whilst addressing varied illumination requirements. The overall result is absolutely beautiful..

Why work with us?

Bespoke British craftsmanship

We have been manufacturing our range of bespoke specialist lighting here in the market town of Altrincham, Cheshire since 1999. Our design team has over 27 years experience designing systems that integrate the latest in lighting technology with a build quality and finish that is worthy of its reputation amongst the shop fitting and retail industries.

Teamwork

None of what we do would be possible without great teamwork and we are so lucky at Display Lighting to have a tremendous team. Every one of us cares about every single order. We strive for perfection in everything that we do but of course it does not end there; our after-sales service is an area where we aim to surpass all expectations.

Reputation

We are very proud to have worked with many of the UK's biggest names in retail, museums and jewellery to provide specialist illumination for displays that can increase sales. We do not employ sales folk, most of our business comes through recommendation. If you walk through any shopping mall in the UK you will find our lighting, working hard.
